

# Karyopharm to Present at J.P. Morgan 33rd Annual Healthcare Conference

NEWTON, Mass., Jan. 7, 2015 (GLOBE NEWSWIRE) -- Karyopharm Therapeutics Inc. (Nasdaq:KPTI), a clinical-stage pharmaceutical company, announced today that Michael G. Kauffman, MD, PhD, Chief Executive Officer of Karyopharm, is scheduled to present at the J.P. Morgan 33rd Annual Healthcare Conference in San Francisco on Tuesday, January 13, 2015 at 2:30 p.m. PST.

A live webcast of the presentation can be accessed under "Events & Presentations" in the Investors section of the company's website at <http://investors.karyopharm.com/events.cfm>. A replay of the webcast will be archived on the company's website for 30 days following the presentation.

## About Karyopharm Therapeutics

Karyopharm Therapeutics Inc. (Nasdaq:KPTI) is a clinical-stage pharmaceutical company focused on the discovery and development of novel first-in-class drugs directed against nuclear transport targets for the treatment of cancer and other major diseases. Karyopharm's Selective Inhibitors of Nuclear Export / SINE™ compounds function by binding with and inhibiting the nuclear export protein XPO1 (or CRM1). The inhibition of XPO1 by Karyopharm's lead drug candidate, Selinexor (KPT-330), a first-in-class, oral SINE™ compound, leads to the accumulation of tumor suppressor proteins in the cell nucleus, which subsequently reinitiates and amplifies their tumor suppressor function. This is believed to lead to the selective induction of apoptosis in cancer cells, while largely sparing normal cells. Over 550 patients have been treated with Selinexor in Phase 1 and Phase 2 clinical trials in advanced hematologic malignancies and solid tumors. Karyopharm has initiated three registration-directed clinical trials of Selinexor, one in older patients with acute myeloid leukemia, one in patients with Richter's Transformation and one in patients with diffuse large B-cell lymphoma (DLBCL). Karyopharm plans to initiate a single-arm trial in multiple myeloma in the first half of 2015 that is intend to be registration-directed and other potential registration-directed trials in hematological and solid tumor indications are being evaluated. Additional Phase 1 and Phase 2 studies are ongoing or currently planned, including multiple investigator-sponsored studies of Selinexor in combination with one or more approved therapies. SINE™ compounds have shown biological activity in models of cancer, inflammation, autoimmune disease, certain viruses, and wound-healing. Karyopharm was founded by Dr. Sharon Shacham and is located in Newton, Massachusetts. For more information about Karyopharm, please visit [www.karyopharm.com](http://www.karyopharm.com).
